Made with GAMMA

Introduction & Problem Statement

Overview

This project presents a comprehensive analysis of sales data to uncover actionable insights across performance metrics, customer segments, and regional trends.

Tracking sales KPIs enables leadership to make informed, data-driven decisions that directly impact revenue growth and operational efficiency.

Key Business Challenges

Sales Trend Identification

Identify and analyze sales fluctuations and patterns over time.

Customer & Regional Analysis

Analyze customer categories and understand regional performance differences.

Shipping & Customer Performance

Evaluate shipping efficiency and identify high-value customers driving revenue.

Made with GAMMA

Tools, Technologies & Dataset

Tools & Technologies Used

Power BI

Interactive dashboards and visual analytics

Excel

Data exploration and preliminary analysis

Data Cleaning

Ensuring accuracy and consistency of data

Data Visualization

Transforming raw data into clear, actionable visuals

Dataset Overview

📦 Sales Data

Transaction-level records including order amounts, quantities, and GST details.

👤 Customer Data

Customer profiles including category (Wholesaler, Retailer, Manufacturer, Consumer).

🗺️ Region & City Data

Geographic breakdown of sales across regions and cities nationwide.

🚚 Shipping Details

Shipment type records: By Vessel, By Road, and By Air.

Made with GAMMA

DATA PREPARATION

Data Cleaning & Key KPIs

Data Cleaning & Preparation Steps

Removed Duplicates & Null Values

Ensured data integrity by eliminating redundant and missing records.

Standardized Data Formats

Unified date formats, naming conventions, and category labels for consistency.

Created Calculated Measures

Built custom DAX measures in Power BI for KPIs like Total Sales, GST, and Averages.

Key Performance Indicators

₹1.14Cr

Total Sales

₹1,13,76,170 in total revenue generated

19

Total Orders

Order transactions processed

1360

Qty Sold

Total units sold across all categories

₹20.5L

Total GST

₹20,47,710 in GST collected

₹3.07L

Avg Sales

₹3,07,464 average order value

Made with GAMMA

Dashboard Overview & Monthly Sales Trends

Interactive Dashboard Filters

The Power BI dashboard features four dynamic filters enabling deep-dive analysis:

- 📅 Financial Year
- 🌍 Sales Region
- 👫 Customer Segment
- 👔 Sales Manager

Each visual in the dashboard is interactive and dynamically cross-filters based on user selection, enabling real-time slice-and-dice analysis.

Monthly Sales Trends

Sales volume varies significantly across months, revealing clear seasonal patterns and peak performance periods.

📈 Peak Sales Periods

Certain months exhibit dramatic sales spikes, indicating seasonal demand or campaign-driven surges. These periods are key targets for inventory and resource planning.

📉 Low-Performance Months

Identifying slow months allows the business to proactively deploy promotions, discounts, or targeted outreach to maintain consistent revenue flow.

Made with GAMMA

Customer Category & Top Customers Analysis

Sales by Customer Category

Wholesaler
Highest revenue contributor — bulk orders drive the majority of total sales value.

Manufacturer
Second key segment with consistent large-volume purchases for production needs.

Retailer
Mid-range category contributing steadily to order frequency and revenue base.

Consumer
Smallest segment by volume but valuable for brand reach and market penetration.

Top 10 Customers by Sales

A small group of customers accounts for the vast majority of total revenue — a classic Pareto distribution in action.

🏆 Key Revenue Drivers
The top 10 customers contribute disproportionately to total sales. Maintaining strong relationships with these accounts is critical for revenue stability.

🎯 Retention Priority
High-value customers should receive dedicated account management, personalized offers, and priority service to reduce churn risk.

📊 Pareto Insight
A few customers drive the majority of revenue — focusing growth efforts on this segment yields the highest ROI.

Sales by City & Shipping Analysis

Geographic Distribution of Sales

Sales performance varies widely across cities, highlighting both high-performing hubs and underserved markets.

🌆 High-Performing Cities

Top cities generate the majority of revenue and serve as strategic sales centers. These locations should be prioritized for inventory stocking and sales team deployment.

📍 Underperforming Regions

Cities with low sales volumes represent growth opportunities. Targeted campaigns, regional partnerships, or pricing strategies can unlock this potential.

Shipping Method Analysis

Understanding shipment type distribution enables cost optimization and delivery efficiency improvements.

By Vessel

Used for large bulk shipments — cost-effective for high-volume, long-distance delivery to port-accessible locations.

By Road

Most commonly used method for domestic deliveries — flexible, widely accessible, and suitable for varied order sizes.

By Air

Fastest shipping mode for urgent or time-sensitive orders — higher cost but critical for premium customer satisfaction.

I

Key Insights & Business Recommendations

Key Insights from the Analysis

1

Wholesalers Lead Revenue

Wholesalers contribute the highest share of total sales, making them the single most critical customer segment for sustained revenue growth.

2

Seasonal Sales Spikes

Certain months consistently show peak sales surges, indicating seasonal demand patterns that can be anticipated and leveraged.

3

Concentrated Revenue Base

A small number of customers drive the majority of total revenue – highlighting both opportunity and risk in the current customer portfolio.

Business Recommendations

Focus on High-Value Customers

Develop loyalty programs and dedicated account management for top revenue-generating customers to protect and grow this critical base.

Improve Low-Performing Regions

Deploy targeted regional campaigns, revised pricing strategies, or new distribution partnerships in underperforming cities and areas.

Optimize Shipping Strategy

Review the mix of air, road, and vessel shipments to balance delivery speed with cost efficiency, especially for bulk wholesale orders.

Made with GAMMA

This Sales Analysis Dashboard transforms raw transactional data into meaningful, actionable intelligence that empowers leadership to make confident, data-driven business decisions.

📊 Data-Driven Decisions

The dashboard consolidates sales, customer, regional, and shipping data into a single interactive view — eliminating guesswork from strategic planning.

🎯 Focused Growth Strategy

By identifying top customers, peak periods, and high-performing cities, the business can allocate resources where they generate maximum returns.

⚙️ Operational Efficiency

Shipping and regional insights highlight cost-saving opportunities and process improvements that directly impact margins and customer satisfaction.

Key Takeaway: A well-designed analytics dashboard is not just a reporting tool — it is a strategic asset that drives measurable business growth and informed decision-making at every level of the organization.
