POWER BI PROJECT

BLINKIT SALES ANALYSIS DASHBOARD

A comprehensive Power BI project analyzing sales performance, customer trends, and outlet insights to support data-driven business decision-making.

INTRODUCTION

ABOUT BLINKIT & PROJECT PURPOSE

Blinkit (formerly Grofers) is **India's leading last-minute delivery app**, promising grocery and essential deliveries in minutes. With rapid expansion across urban and semi-urban India, understanding sales performance is mission-critical.

ABOUT BLINKIT

Quick-commerce platform operating across Tier 1, 2 & 3 cities with multiple outlet types including grocery stores and supermarkets.

PROJECT OBJECTIVE

Build an interactive Power BI dashboard to analyze sales trends, identify top-performing outlets and item types, and generate actionable business insights.

PROBLEM STATEMENT

Understand which outlets, locations, and product categories drive the most revenue—and where improvement opportunities exist.

Made with GAMMA

TOOLS, TECHNOLOGIES & DATASET OVERVIEW

TECH STACK

POWER BI

Interactive dashboards, slicers, and dynamic visualizations for end-to-end reporting.

MICROSOFT EXCEL

Raw data storage, initial exploration, and preprocessing before importing into Power BI.

DAX

Data Analysis Expressions used to build calculated columns, measures, and KPI formulas.

DATASET OVERVIEW

📦 TOTAL SALES

Aggregated revenue across all outlets

🛍️ ITEM COUNT

8,523 unique product entries

🏪 OUTLET TYPES

Grocery Stores & Supermarket Types 1, 2, 3

📂 ITEM CATEGORIES

Fruits, Snacks, Dairy, Frozen, Canned & more

⭐ RATINGS

Customer satisfaction score per item

Made with GAMMA

DATA CLEANING, TRANSFORMATION & KEY KPIS

DATA PREPARATION STEPS

REMOVED NULL VALUES

Identified and eliminated missing or blank records to ensure data integrity across all columns.

STANDARDIZED COLUMNS

Unified naming conventions, corrected data types, and normalized categorical fields like outlet size and item fat content.

CALCULATED COLUMNS & MEASURES

Used DAX to create measures for Total Sales, Average Sales, Item Count, and Average Rating aggregations.

KEY KPIS AT A GLANCE

$1.20M

TOTAL SALES

Overall revenue generated across all outlets and categories

$141

AVG. SALES

Average revenue per transaction

8523

ITEMS

Total number of unique items in the dataset

3.9

AVG. RATING

Mean customer satisfaction score across all products

Made with GAMMA

DASHBOARD

DASHBOARD OVERVIEW & INTERACTIVE FEATURES

The Power BI dashboard is designed for end-users to explore Blinkit's sales data dynamically. Three primary filter panels allow instant slicing of all visuals simultaneously.

OUTLET LOCATION FILTER

Toggle between Tier 1, Tier 2, and Tier 3 city outlets to compare geographic performance.

OUTLET SIZE FILTER

Filter by Small, Medium, or High (Large) outlet size to identify how store footprint affects sales.

ITEM TYPE FILTER

Drill down into specific product categories such as Fruits, Snacks, Dairy, or Frozen Foods.

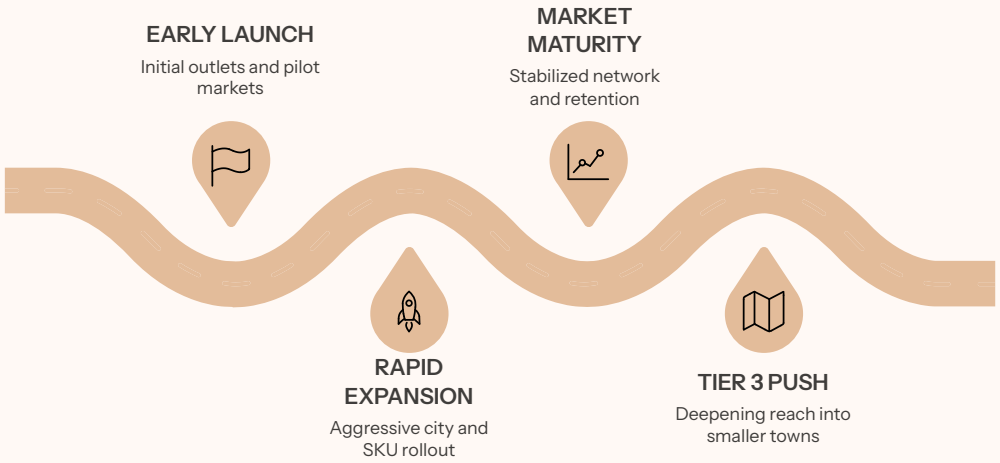
All visuals are cross-filtered — selecting any slicer instantly updates every chart and KPI card on the dashboard in real time.

Made with GAMMA

SALES ANALYSIS & ITEM TYPE BREAKDOWN

OUTLET ESTABLISHMENT TREND

Year-wise growth analysis reveals how Blinkit scaled its outlet network over time, highlighting peak expansion periods and market penetration milestones.



Outlets established in peak years contributed disproportionately to total sales, reflecting network-effect advantages.

TOP SELLING ITEM CATEGORIES

FRUITS & VEGETABLES

Consistently the top-performing category, driven by high purchase frequency and repeat customers.

SNACK FOODS

Second highest contributor to total sales volume with strong impulse-buy behavior observed.

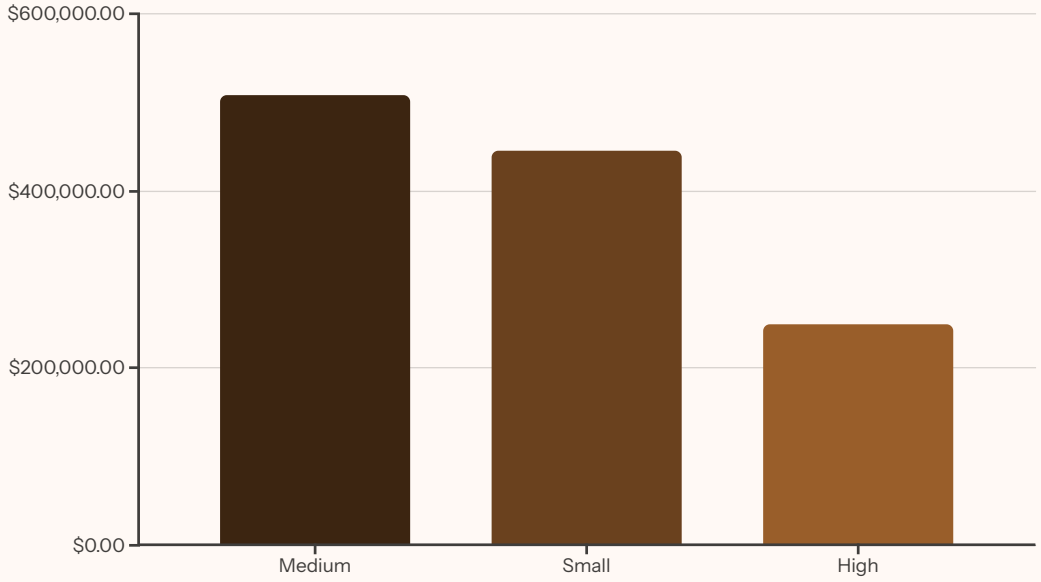
FAT CONTENT COMPARISON

Regular Fat items significantly outsell **Low Fat** alternatives, indicating customer preference trends that can inform inventory decisions.

Made with GAMMA

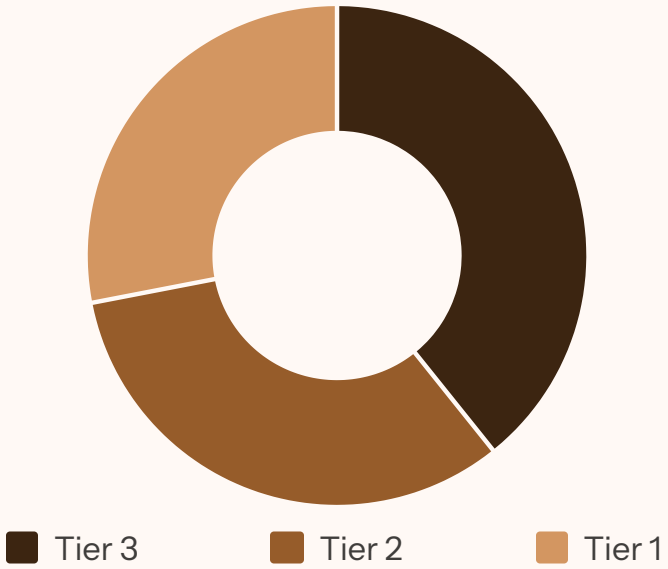
OUTLET & LOCATION ANALYSIS

SALES BY OUTLET SIZE



Medium-sized outlets lead in total sales, suggesting optimal balance between inventory capacity and operational efficiency.

SALES BY OUTLET LOCATION TIER



Tier 3 locations surprisingly generate the **highest share of total sales**, pointing to underserved market demand in smaller cities.

Made with GAMMA

OUTLET TYPE COMPARISON

Comparing Grocery Stores vs. Supermarket Types across the three key performance dimensions: Sales, Item Count, and Ratings.

GROCERY STORE

- Lower total sales volume
- Smaller item variety
- Slightly higher avg. rating due to personalized service
- Strong in Tier 3 neighborhoods

SUPERMARKET TYPE 1

- Highest total sales among all outlet types
- Largest item count & product diversity
- Wide footprint across all tiers
- Dominant contributor to overall revenue

SUPERMARKET TYPE 2 & 3

- Moderate sales with niche product offerings
- Higher avg. ratings compared to Type 1
- Focused urban presence
- Growth potential with targeted inventory

Supermarket Type 1 outperforms all other outlet types in both total sales and item count, making it the highest-priority segment for investment.

Made with GAMMA

KEY INSIGHTS & BUSINESS RECOMMENDATIONS

🔍 KEY INSIGHTS

TIER 3 LEADS SALES

Outlets in Tier 3 cities generate the highest total revenue, revealing untapped demand in smaller urban markets.

MEDIUM SIZE WINS

Medium-sized outlets consistently outperform small and high-capacity outlets in sales efficiency.

CATEGORY DOMINANCE

Fruits, Vegetables, and Snack Foods dominate sales, while Regular Fat items outsell Low Fat alternatives significantly.

💡 RECOMMENDATIONS

1 EXPAND IN TIER 3 CITIES

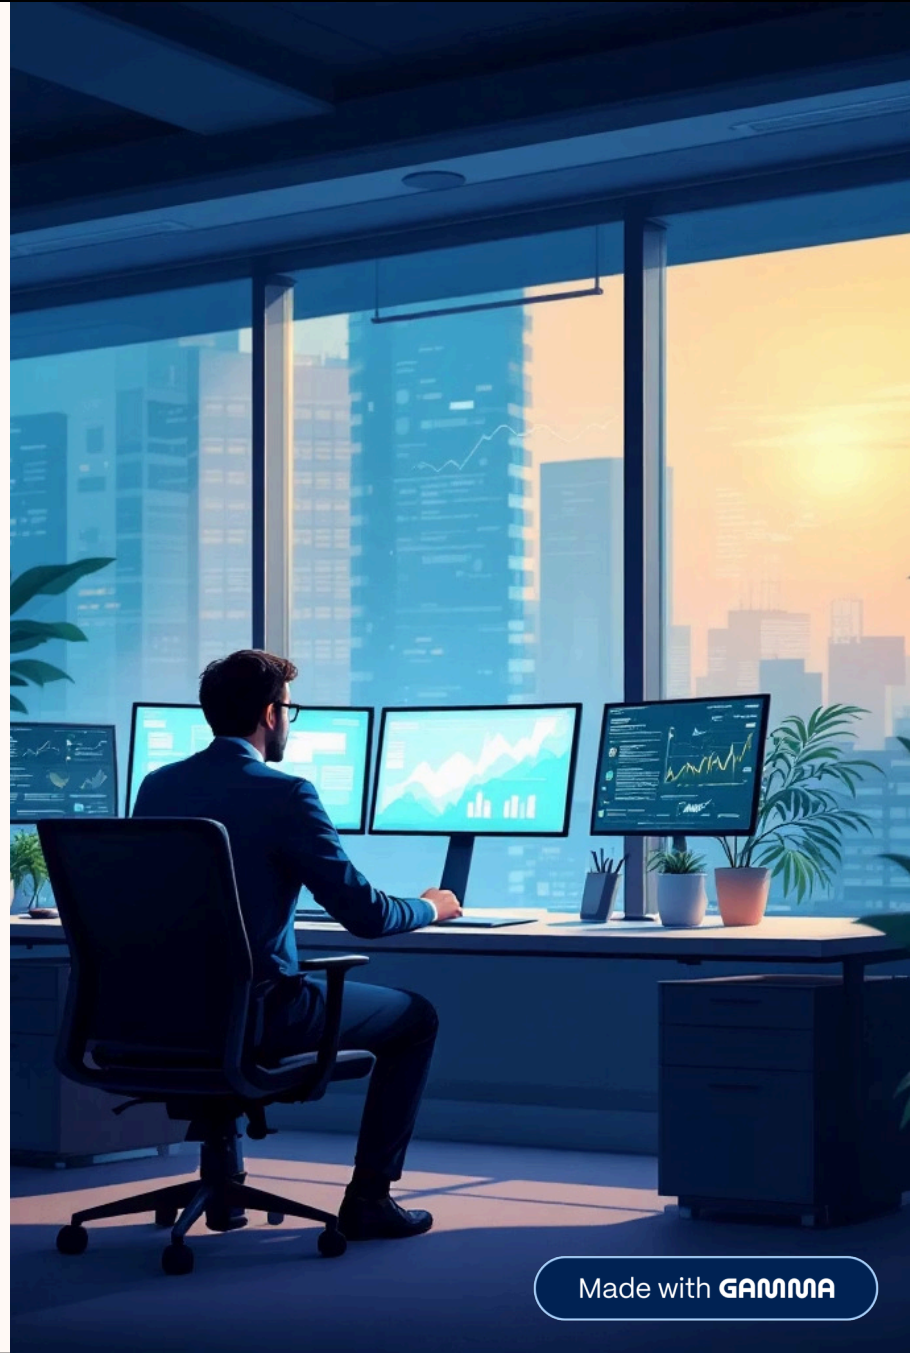
Prioritize new outlet openings in Tier 3 locations to capitalize on high demand and low competition.

2 BOOST HIGH-PERFORMING CATEGORIES

Increase inventory depth in Fruits, Snacks, and Dairy to reduce stockouts and maximize revenue capture.

3 IMPROVE LOW-RATED PRODUCTS

Audit items with ratings below 3.5 and either improve quality, adjust pricing, or phase them out.



Made with GAMMA

CONCLUSION & THANK YOU

📊 DASHBOARD IMPACT

The Blinkit Power BI dashboard transforms raw sales data into clear, actionable insights — enabling faster, evidence-based decisions for outlet expansion, inventory planning, and customer satisfaction improvement.

✅ SUMMARY OF FINDINGS

Tier 3 outlets and Medium-sized stores are the top revenue contributors. Supermarket Type 1 leads all outlet types. Fruits & Snacks dominate item sales. A focused strategy on these segments can significantly boost overall performance.
